## Activities

### Tools Activities

### Use of an integrated toolmanagement system:

- > Reduction of tooling costs
- > Reduction of search times
- > Product quality improvement
- > Increase in machine operating times and capacity
- > Transparency of tool data during operations
- > Increase of process reliability
- > Foresighted planning and improvement of operations

### Features of sToolTracker:

- > Classification of tools and tool components
- > Specification of tools including attachments
- > Tracking of tools with serial number, lot number and expiration dates
- > View tool inventory based on multiple filters
- > Posting of tool adjustments and movements
- > Adding tool BOMs to production operations

**We support you in integrating sToolTracker into your operating system.**

You have questions about cloud process integration. We are the right partner.
